Subject: **400CW Fiberglass Pressure Plate**

Tubelite will now be offering a Fiberglass Pressure Plate PTB99 that can be used in place of our standard aluminum pressure plate M4TB224 with 400 series curtainwall backmembers.

PTB99 is off-white in color with screw holes and weeps already machined (Weeps are 3/8" diameter holes – not slots).

E3193 (2 1/2" x 3/4") will be the only snap cover offered with PTB99 and it has been specifically designed to engage the new pressure plate. Filler profile E3192 can be used for applications into punched openings.

PTB99 can be ordered in stock lengths of 290" only with a list price of \$230. E3193 has standard stock length of 290" with a list price of \$102.

Special fabrication tooling will apply for fiber glass pressure plate. See installation sheet for details.
