

## Best Practices for Using INT45 Mounting Frame

### Inserting Frame and adjusting for project

1. Load Frame-Perimeter-Tubelite-INT45 family into existing project.
2. Place Frame at center point of Curtain Wall.
3. Adjust to fit around the perimeter of the Curtain Wall. There are two options for adjusting the dimensions see below:
  - a. Manually change the instance parameters for Wall Height and Wall Width
  - b. Go to elevation view of the curtain wall and adjust the Shape Handles to stretch the frame to suit your application.
    - i. ***The shape handles can be locked to the exterior of the curtain wall to update as required if the curtain wall changes size.***

### Adjusting Exterior Frame for Different Applications

4. Select Frame-Perimeter-Tubelite-INT45 family
  - a. Left, Right and Top Channel can be deselected on a per instance basis to allow for the greatest flexibility in you models.
